GAS SUPPLY CONVERSION AND ORIFICE REPLACEMENT GUIDE

NOTE: SIDE BURNER ASSEMBLIES CAN BE ORDERED AS A WHOLE UNIT WITH OR FOR NATURAL GAS (NG) OR LIQUID PROpane (LP). CAPS AND ORIFICES CAN BE INDIVIDUALLY REPLACED IF REQUIRED - SEE COMPONENT NUMBER BELOW.

THE FOLLOWING PART NUMBER IS FOR LIQUID PROPANE.
PART NUMBER: 510-0055
SEE NOTE 200-0071

Gas Supply Conversion and Orifice Replacement Guide

PURPOSE:

If a barbecue or side burner unit is to be operated with a different gas supply other than the one provided by the factory, a conversion kit is required. This change must be done in order to ensure that:

- The unit is safe to operate.
- The unit has correct combustion of gas.
- The unit outputs the expected heat (BTUH's).
- Your warranty is maintained.

By changing from Natural Gas (NG) to Liquid Propane (LP) or vice versa, the heat output as well as the regulating pressure and oxygen content of the gas/air mixture also changes. Therefore a change in orifice (gas injector) size is required, (usually larger or smaller depending on the application), as well as a change in the main pressure regulator setting to allow for proper gas pressure to the valves and burners.

On the next pages you will find the necessary information to replace orifices, adjust burners and convert pressure regulators to suit your application. This information is generalized due to the different models manufactured, nevertheless it applies to all of them in the same fashion as it indicates the location and how to access orifices and regulators.

For additional information, all conversion kit numbers and components are listed at the end of this guide in the appendix section.

WARNING:

As the unit will be partially disassembled during gas supply conversion and orifice replacement, it is necessary to remove all power sources to the unit (including but not limited to: barbeques lights, rotisserie motor and igniter module batteries) as well as all gas supplies (Natural gas or Liquid propane).

Alfresco Gourmet Grills recommends a qualified gas technician to perform this service.

HOW TO OBTAIN SERVICE:

For service, please contact our Alfresco Gourmet authorized service agency at:
(866) 203-5607

Please provide the model and serial numbers (located under drip pan), the date of installation and a brief description of the problem.

For all other Alfresco Gourmet products related questions, please contact:

Alfresco Gourmet Grills
7039 East Slauson Avenue
Commerce, CA 90040

(888) 383-8800
(323) 722-7900
(323) 726-4700 (Fax)

BARBEQUES:

A typical barbecue unit will have the following burner components:

| MODEL: | BURNER QUANTITIES: | | | | |
|------------|--------------------|------------|------------|------------|-------------|
| | SMOKER | "U" BURNER | SEAR-ZONE™ | ROTISSERIE | SIDE BURNER |
| AGBQ-30 | 1 | 2 | ~ | 1 | ~ |
| AGBQ-30SZ | 1 | 1 | 1 | 1 | ~ |
| AGBQ-30IR | 1 | ~ | 2 | 1 | ~ |
| AGBQ-42 | 1 | 3 | ~ | 1 | ~ |
| AGBQ-42SZ | 1 | 2 | 1 | 1 | ~ |
| AGBQ-56 | 1 | 3 | ~ | 1 | 2 |
| AGBQ-56SZ | 1 | 2 | 1 | 1 | 2 |
| AGBQ-56BFG | 1 | 3 | 1 | 1 | ~ |
| AGSB-2 | ~ | ~ | ~ | ~ | 2 |
| AGSZ | ~ | ~ | 1 | ~ | ~ |

TYPICAL BARBEQUE

Figure 1

KNOBS

FRONT PANEL

SMOKER TRAY

Figure 2

STEPS:

- 1– Remove the knobs from the valve stems by pulling them straight out of the valve stems.
- 2– Remove the smoker and drip trays.
- 3– Remove the front panel screws (4) located at each corner (2 facing down and 2 on the upper corners)
- 4– Remove the front panel to expose valves, gas manifold and igniter assembly. (*Figure 2*)

Barbeques cont.

5– Remove warming rack, grills, briquette trays and “U” burners from the barbecue unit. (*Figure 3*)

6– Should your barbecue unit be equipped with a Sear-Zone™ burner, also remove it. (*Figure 4*)

(*Figure 3*)

(*Figure 4*)

(*Figure 5*)

(*Figure 6*)

7– Now that the gas manifold and valves are exposed (*Figure 5*), remove and replace each valve's orifice for the proper gas supply, Natural Gas or Liquid Propane. Standard “U” burners have an angled valve with an orifice located in the valve's body, on the back at the end of an adapter nipple. (*Figure 6*)

Barbeques cont.

- 8– If your unit is equipped with a Sear-Zone™ burner, the valve has an orifice mounted externally to the valve body. The orifice is directly attached to the barbecue fire box with a bracket and connected to the valve with a flexible stainless tube. (*Figure 7*). It is mounted on this bracket along with the Sear-Zone™ igniter electrode. Remove and replace this orifice from the inside of the firebox. (*Figure 8*)

(*Figure 7*)

(*Figure 8*)

- 9– The smoker unit's orifice is also mounted externally from the control valve body. It is connected with a small 3/16" Ø aluminum tube. The orifice is mounted on a bracket attached to the fire box. To replace this orifice, remove the mounting bracket from the fire box and gently bend the aluminum tubing outward to prevent kinks. After replacement, re-install bracket / orifice assembly back into the fire box. (*Figure 9*)

(*Figure 9*)

Barbeques cont.

10– To replace the rotisserie orifice, it must be accessed from the back of your barbecue unit. Just like the Sear-Zone™ and the smoker unit, the rotisserie unit has an externally mounted orifice connected to the valve body with a long flexible stainless tube. Remove the rear rotisserie access plate (*Figure 10*) and locate the orifice on the compression fitting that is mounted on the burner bracket (*Figure 11*). Replace orifice and re-install the access cover.

(*Figure 11*)

SIDE BURNERS:

Side burners can be found as separate items such as the AGSB-2 (2 burner unit) and AGSZ (Sear-Zone™ unit) or built within the frame of the barbecue such as our AGBQ-56 model Deluxe Grill.

There are two types of side burners units. Units manufactured until 2002 have side burner units that have been discontinued, yet conversion kit are still available. Units built starting on 2003 have all components available. **Refer to the appendix area of this publication for detail description of each individual side burner model.** In either case, their respective orifices are installed and accessed in the same fashion. If a side burner is part of a barbecue such as the Deluxe Grill, gas will be supplied to the burner from the same manifold that feeds the main unit.

Also please note that all Individual units have their own pressure regulators.

If the side burner is part of a Deluxe Grill, the manifold will be accessed in the same fashion as shown on page# 4 — item # 7. For all other side burners units, follow the next few steps.

AGSB-2 Dual Side Burner

STEPS:

- 1- A dual side burner unit AGSB-2 (*Figure 12*) has the orifices readily available. Simply remove the top grate, burner external brass caps and inner aluminum caps. (*Figure 13*)
- 2- Orifices are accessible directly from the top(*Figure 14*). Remove and replace each orifice as required and re-assemble the side burners.

(*Figure 12*)

models only)

TOP VIEW

Side Burners cont.

NOTE:

For side burners built 2002 or earlier, a special tool (Part number: 180-0018) is required and included in the conversion kit. This tool is required to remove and install the orifices in the main and simmer burner nozzles. (*see Old Style Burner drawing in the Appendix area.*)

Once the side burner external cap has been removed use this orifice removal tool by inserting the hexagonal socket side downward into the tubes. Once the tool has been inserted and locked into the orifices, use a medium sized flat head screw driver and unscrew the burner orifices. (*See figure 15*). Install the new orifices in the same fashion.

(Figure 15)

Additionally, for side burner units built 2002 or earlier , there is one additional orifice that needs to be replaced besides the orifices mentioned on page 7 - (figure 14). This additional orifice to be changed is located on the valve body that feeds the simmer burner only.

This valve can be accessed as explained on page 3 - (figure 2) if the side burner is built with the barbecue or as shown on page 9 - (figure 16) if the side burner is a stand-alone unit. Locate the valve and replace the orifice located on the right side of the valve's body that is facing the front panel . Use a small flat head screwdriver for this task.

(Figure 16)

(Figure 17)

Side Burners cont.

AGSZ Sear-Zone™ Side Burner

STEPS:

- 1- A Sear-Zone™ side burner unit AGSZ (*Figure 18*) has the orifice located inside the firebox assembly in the same configuration as a barbecue grill.

To access the orifice remove the top grate, Sear-Zone™ burner, knob, front control panel and drip tray and front control panel (*Figure 19*).

GRATE

(*Figure 18*)

SEAR-ZONE™ BURNER

KNOB

FRONT PANEL

DRIP TRAY

(*Figure 19*)

- 2– Once the front panel is removed the Sear-Zone™ orifice will be viewable (*Figure 20*). It is located externally from the control valve in similar configuration as the barbecue unit. (*Refer to page 5 point 8*).

It is however, easier to reach the orifice from the inside of the fire box assembly as it is mounted on a support bracket next to the electrode assembly. (*Figure 21*). Remove and replace. Re-assemble the unit.

Side Burners cont.

(Figure 20)

(Figure 21)

PRESSURE REGULATORS:

Your barbecue grill as well as side burner unit is equipped with a dual gas supply (NG or LP supply) pressure regulator standard from the factory. It is necessary however, to adjust the regulator to allow for correct pressure to flow to the gas manifold.

Units built before 2004 will be equipped with a Harper-Wyman™ brand regulator. Units built after 2004 will be equipped with a Maxitrol™ brand regulator. Both regulators are interchangeable and the adjustment to both is similar, yet the adjustment device looks different. Please refer to the following pages to correctly identify each regulator brand.

When converting from natural gas (NG) to liquid propane (LP) your conversion kit will include a 1/2"Ø MPT to 3/8"Ø Male Compression adapter nipple. This nipple is required to connect your regulator to a standard propane tank and hose kit.

All pressure regulators are located on the back of the units and on the left side. (Figures 22, 23 & 24)

BARBEQUE GRILL

(Figure 22)

AGSB-2 SIDE BURNER

(Figure 23)

AGSZ SIDE BURNER

(Figure 24)

PRESSURE REGULATOR TYPES:

As mentioned before, there are two different styles of regulators, both are interchangeable. Please identify your unit's type by the following diagrams and follow the correct instructions for conversion:

Maxitrol™ Brand Regulator

2004 or newer units

Harper-Wyman Co.™ Brand Regulator

2003 or older units

REGULATOR'S SUPPLY CONVERSION:

Locate the inlet elbow (1/2" Ø black pipe elbow) and attach the hose regulator nipple using gas approved gas plumbing seal or yellow Teflon® tape. (This step only applies to NG to LP conversion) (Figure 25)

PRESSURE ADJUSTMENT: (MAXITROL™ UNITS ONLY)

- 1– To convert the Maxitrol™ pressure regulator from NG to LP (or vice-versa) , remove the brass cap located on the large round dome of the regulator body. The cap has a sealing washer; do not lose or damage this sealing washer as it is required for a gas tight seal. (Figure 26)
- 2– Located on the cap is also a black plastic plunger. This plunger provides the correct pressure to a spring located inside the body of the regulator. It is necessary to reverse the direction of the plunger so it provides the right amount of pressure to the spring inside the body of the regulator.
To reverse the plunger pull it out of the brass cap by pushing it sideways until it snaps and pops out.
- 3– The plunger is labeled “NAT” or “LP” for natural gas or liquid propane. (Figure 27). The regulator is set to the correct pressure according to the way the plunger faces the regulator body. If the plunger label reads “NAT” towards the body of the regulator , it will be set for natural gas. If it reads “LP” it will be set for liquid propane.

(Figure 26)

PLUNGER DETAIL:

The regulator plunger is labeled “NAT” for Natural gas or “LP” for liquid propane. (The “LP” side has a wide disk on the end.) The side facing the body of the regulator determines what use is the regulator set for.

Example: The image above (Figure 26) is showing a regulator set for natural gas.

- 4– Once the regulator plunger has been reversed for it's appropriate use and snapped back into the brass cap, re-install the cap with the sealing washer back into the body of the regulator. The regulator pressure conversion is complete.

PRESSURE ADJUSTMENT: (HARPER-WYMAN CO.™ UNITS ONLY)

- 1– To convert the Harper-Wyman Co.™ pressure regulator from NG to LP (or vice-versa) , remove the brass cap located on the large round dome of the regulator body. The cap has two locking stubs at each end that hold it in place, turn carefully until released from the regulator body. The cap has a sealing o-ring; do not lose or damage this sealing o-ring as it is required for a gas tight seal. (*Figure 28*)
- 2– This cap provides the correct pressure to a spring located inside the body of the regulator. It is necessary to reverse the direction of the cap so it provides the right amount of pressure to the spring inside the body of the regulator. To reverse the cap pull it straight out of the regulator body once it has been unlocked by turning it counter clockwise.
- 3– The cap is labeled “NAT” or “LP” for natural gas or liquid propane. (*Figure 29 and 30*). The regulator is set to the correct pressure according to the way the cap faces the user. If the plunger label reads “NAT”, it will be set for natural gas. If it reads “LP” it will be set for liquid propane.

PLUNGER DETAIL:

The regulator plunger is labeled “NAT” for Natural gas or “LP” for liquid propane. (The side facing the user determines what use is the regulator set for).

Example: The image above (*Figure 28*) is showing a regulator set for natural gas.

(Figure 29)

(Figure 30)

- 4– Once the regulator cap has been reversed for it's appropriate use and re-installed with the sealing o-ring back into the body of the regulator, the pressure adjustment is complete.

Your barbecue grill or side burner is now converted to it's new gas supply. Re-check all orifices and seals for proper tightness before applying power, gas supply and lighting your unit to adjust burners.

BURNER ADJUSTMENT:

As a final step it is now necessary to adjust some burners for the correct air / gas mixture. All burners operate in the same fashion with the exception of the gas valves.

Gas valves for Sear-Zone™ and Rotisserie burners have a direct feeding valves. Gas valves for "U" shaped and Smoker burners have "idling" valves. "Idling" valves permit adjustment for the "LOW" setting in the valve to prevent the flame from going out, so they require adjustment when changing the gas supply type.

"Direct" feed valves do not have a "LOW" adjustment because they are designed for high BTUH and high gas flow operation such as the one required on Sear-Zone™ and Rotisserie burners. These burners will not go out even on their lowest setting. They are designed to run always on HIGH setting, so there is no adjustment necessary after a gas supply change.

To adjust idling valves on "U" burners and Smoker burners follow the next steps:

- 1– Verify that all burner holes are clean and free of debris.
- 2– Turn the valve to "HI" and light up the burner by pressing the igniter button. Let the unit "WARM UP" for 10 minutes.
- 3– Once the burner is lit and warmed up, turn to "LOW" setting.
If the flame starts to go out you must adjust the "IDLE" port inside the valve.
- 4– Using a small flat screwdriver, insert the screwdriver blade through the stem of the valve and adjust.
Counter clockwise for MORE gas flow, clockwise for less.
(Figure 31)

(Figure 31)

- 5– Adjust the flame so the burner is fully lit around the perimeter when the knob is in the LOW position.
- 6– "U" burners also have an AIR INLET adjustment. If the flame around the perimeter of the burner seems to detach from the burner body, too much air is being injected into the burner. Adjust the air / gas mix by loosening the adjustment lock screw and turn clockwise for LESS air, counter clockwise for MORE. *(Figure 32)*.
If the flame turns yellow in color, there is not enough AIR into the gas mixture. Adjust the air inlet until the flame is light blue in color with small yellow tips for proper burning. You might need to repeat step 4 and 6 a few times to find an adequate balance.

Your unit is now fully converted to a new gas supply and ready for use.
